Introduction

Abu Dhabi Agriculture and Food Safety Authority (ADAFSA) is keen to adopt best practices and strive to improve services and improve food safety through innovative solutions that promote the principle of joint responsibility between government and the private sector by enhancing the role of owners of food, agricultural and animal establishments in ensuring continuous product safety responsibility at the establishments.

The self-control system has been developed through which the new advanced technology will be used to monitor the establishments. The system will have many features, including self-inspection, which will enable the business operator to check all processes affecting the safety of products in the establishment and document the existing procedures to be available to the inspector to verify the status of the establishment, in addition the system also allows the business operator to communicate with the inspector in case of there is a risk requires to consult with the inspector to conduct the remotely inspection.

Doc. No.: F12- SPM-CS-02Issue No.:01Issue Date:23/09/2019Page 2 of 11[RESTRICTED]Copies of this document available in ADAFSA Intranet are only the latest, valid and controlled documents. All other copies
are uncontrolled and valid only on the date printed. Last printed: 21/10/2019 1:21 PM

Download the Application

Through the application of self-control, the entity's account will be linked to the ADAFSA systems to ensure effective communication between the Business Operator and the inspector.

Please go to "Apple Store" or "Google Paly" to download the application on your smart phone or device.

SELF-INSPECTION Checklist INSTRUCTIONS

All the parameters will be marked 🕜 as default, your responsibility to respond to each item and to whichever applies to your establishment.

- A mark v reveals satisfactory condition
- A mark (x) reveals an unsatisfactory condition.
- If an item does not pertain to your operation, click the icon (N/A), which means it is not applicable to your establishment.
- Use the icon 🖉 to add attachment (document, photo.etc.).
- Use the icon () to add note related to the parameters.
- Use the icon () to add the grace period needed for the corrective action by days

A corrective action plan must be developed to address all items which were marked \checkmark . This action plan should note the unsatisfactory condition observed, the corrective action necessary, who is responsible for resolving the concern and when it will be corrected.

This inspection is designed to be an action process. As best as practical, every item should be observed. For example, you must watch your handler to make sure they are following proper procedures and not just assume they are following proper procedures. Use of the Guide also is suggested as a selftraining to familiarize the staff / handler with all requirements and/or help them quickly determine the overall compliance level.
